REVIEWED AGAINST IMPLEMENTED WORKFLOWS · OCTOBER 6, 2026

Festio current operating reference

Use this reference alongside Help and Academy. Screenshots and older decks are illustrations; current written procedures govern the workflow. Availability depends on event configuration, permissions and entitlements.

Rehearsal boundary: software checks do not replace a physical camera, venue-network and approved-message-delivery rehearsal. RFID is not a delivered capability in this update.

Prepare → Record → Reconcile

Current operating procedure · October 6, 2026

1. ONLINE PREPARATION

- Correct Active event
- Prepare this scanner
- Verify count + expiry
- 30-minute saved manifest

2. SHORT OUTAGE

- Keep the page open
- Eligible QR / manual admission
- Blue result = locally queued
- Duplicate checks: this device

3. RECONNECT

- Sync saved check-ins
- Server revalidates every record
- Resolve Needs review
- Do not clear pending records

Keep protected operations online

Guardian handoffs · daily/session attendance · check-out · live admission requirements

No offline startup/reload or cross-device duplicate guarantee. Rehearse with the venue network.

Check-in day

1. Confirm the correct event is Active, staff accounts have event access, and the enabled scanner modes match your operating plan.
2. Open Check-in → Convention check-in for general admission. Use Start camera, a pass URL/token, or Manual search when manual check-in is enabled. Zone access, Check-out and Daily attendance are separate actions.
3. Read the immediate result popup and Guest guidance panel. Admitted is confirmed; Already admitted is a duplicate outcome; a denial needs its stated reason resolved. Do not treat a cached/offline result as server confirmation.
4. Before a planned outage, open Offline check-in readiness → Prepare this scanner while online. Verify the saved event, pass count, readiness and expiry. Follow the Offline preparation and synchronization staff guide.
5. For configured juniors, rehearse the authorized guardian flow online. Test both allowed and denied movement, not only a successful admission.
6. Use a fictional guest for the rehearsal. Check daily attendance, session entry/exit, denied age eligibility and the admission popup on both a phone and desktop.
7. Before ending the event, reconnect each scanner and resolve pending or Needs review records. Review Results and the entry/exit report, then end the event.

> Keep one active browser tab per scanner and test the actual venue connection and camera hardware.

> **Important:** Offline preparation supports eligible general admissions only within the saved manifest lifetime. It does not establish offline startup, cross-device duplicate prevention or junior pickup safety.

Offline preparation and synchronization

Use a prepared scanner for eligible general admissions during a short connectivity outage.

1. While online and signed into the assigned Active event, open Check-in → Offline check-in readiness → Prepare this scanner. Confirm readiness, event, saved-pass count and expiry.
2. The version-2 manifest expires 30 minutes after download. It must match the selected event. Required admission workflow steps, section admission or a live seating decision can block offline admission.
3. Keep this browser page open and use one active tab per scanner. QR and manual convention admission can use eligible saved guests; manual lookup requires the event's manual-check-in permission.
4. Read Check-in queued offline as a local saved record, not server acceptance. Same-device repeats are detected; another disconnected device cannot see this admission yet.
5. Reconnect and let synchronization run, or choose Sync / retry saved check-ins. Acknowledged admissions are removed from the pending queue; server rejection remains as Needs review.
6. Open Review saved check-ins, resolve the stated reason with an authorized lead and retry. Keep the page and browser data until every record is reconciled.
7. If storage fails, the manifest expires or the scanner says reconnect, stop offline admission. Follow the organizer's outage procedure rather than bypassing the error.

> **Important:** Offline cold start/reload, daily/session attendance, convention check-out and junior handoffs are not supported. Live consent, capacity and multiple disconnected devices need special planning; no venue-wide duplicate guarantee exists offline.

Daily attendance and session entry/exit

General admission, daily presence and session attendance are separate records.

1. Enable Daily attendance in Venue Access → Junior operations if required. A guest must already be admitted before today’s attendance can be recorded.
2. In Check-in choose Daily attendance, select the daily or session action, and use the camera/pass field or Manual search with the corresponding mode.
3. Daily attendance records one mark for the guest on the event-local date. Repeating it must report the existing mark rather than creating another. It does not perform general admission.
4. For a session select the correct session and entry or exit action. Server checks still enforce admission, age eligibility, time window and capacity.
5. An authorized supervisor may use Override and record entry for an age-eligibility exception with a reason. This does not bypass admission, session timing or capacity and is not a guardian-pickup override.
6. Review attendance and entry/exit records after the rehearsal. These actions require a connection.

Junior Platform: authorized guardians and handoffs

Configure who may accompany a junior through protected zone movements and check-out.

1. Open Venue Access → Junior operations. Enable guardian verification for configured juniors and set the guardian designation scope.
2. Choose the junior, authorized guardian and relationship; save the authorization. Review whether each entry is Admin-authorized, Confirmed or Pending guardian confirmation.
3. At the scanner, attempt the junior’s zone entry/exit or check-out. When Guardian required appears, scan the authorized guardian’s pass.
4. If manual verification is enabled, staff can check the person’s identity and select the displayed authorized guardian. This records staff verification; it must not be described as a QR verification.
5. Review the entry/exit report with the guardian, operator and outcome. Configure each junior’s authorization; the setting alone does not create an authorization for every child.

> **Important:** Guardian handoffs remain online. A name on a cached list, an age-group override or an unrelated adult pass cannot authorize a pickup.

Multi-day timetable: rooms, speakers and age groups

Publish a usable event timetable from dated Experience sessions and timed programme segments.

1. Open Experience and the event's active workflow. Configure each session's date, start/end time, room, speaker and audience/age eligibility; enable the Live Program feature where required.
2. Publish the intended workflow and open a test guest's GuestHub → Programme. The timetable shows all configured days with valid start/end times, not just the first three days.
3. Select each day and search by session, room, speaker or age group. Undated, disabled or invalid-duration sessions do not appear. Missing rooms display Room to be announced; missing speakers need organizer input.
4. Confirm event timezone and all days on a phone and desktop. A visible session is not proof that every guest meets its admission rules.
5. Create and title separate moderated Q&A activities for different speakers/sessions. Timetable speaker names do not automatically create or route Q&A queues.

> **Important:** Timetable viewing is online. Publication does not prove conflict-free staffing, live capacity or guest eligibility; rehearse those separately.

Ask the Sheikh: multiple questions and speaker queues

Use one moderated Q&A activity per Sheikh or session so questions reach the intended queue.

1. In Activity studio create Type Q&A and a distinct title containing the speaker/session. Enable Moderate text before it is public.
2. Open Presenter & moderator links and distribute the appropriate staff link securely. Keep guest join links separate.
3. Set the activity Live. Guests can filter Questions & answers only and search by activity/session title before opening the intended Q&A.
4. After submitting, guests use Ask another question to submit again. Q&A is not a one-answer-only quiz.
5. Moderators approve eligible questions before public display, then use Feature, Answered or Dismiss as appropriate. Rehearse the display to confirm unapproved questions stay private.
6. Close or clear the activity when the session ends. Do not assume a countdown or automatic correct-answer reveal applies to free-text Q&A.

Festio Live: activities, Guided Show and display controls

Create live quizzes, voting, polls, surveys, ratings, moderated Q&A and word clouds where enabled.

1. Enable Festio Live for the event and confirm account entitlement. In Activity studio select New activity, enter Type, Title and Description, and add questions/options as appropriate.
2. For a Quiz mark the correct answer and configure question timing/scoring. Voting options are candidates or choices; voting has no objectively correct answer. Keep results hidden until the presenter reveals them.
3. Guests join from GuestHub or the supported join code/QR route. Only eligible/live activities appear; an open page is not proof the activity is accepting responses.
4. Choose an activity and Target display, then Send activity to screen. Use Show welcome / clear activity to remove it from that display.
5. For Guided Show configure automation and phase timings, then start the show. Rehearse answering, countdown, answer reveal and the next question. Auto-advance is conditional on automation being enabled; manual Next/Previous controls remain available.
6. An answer countdown needs an active timed question and server opening/deadline state. Simply selecting an activity or enabling Q&A does not create a quiz timer. Keep the control screen connected and verify the guest and display views.
7. Use Presenter & moderator links for the appropriate staff role. Protect these links. A guest join link is not a moderator link.
8. For Ask the Sheikh, follow the separate Q&A procedure. Rehearse two questions from one guest and moderation before making the activity live.

> Turn on "Moderate text" when creating an open-text, word-cloud, or Q&A activity so you can approve responses before they appear on the public display.

> **Important:** Live responses, moderation, display updates and synchronized show controls require connectivity. Do not promise that Q&A automatically advances through fixed correct answers.

FestioMe: guest community & groups

GuestHub holds event services; FestioMe opens conversations, people, groups and meetups.

1. Enable FestioMe in Features & Channels and configure event community access. Open the organizer FestioMe workspace to manage groups, channels and moderation.
2. Guests enter through their own GuestHub → FestioMe link so the correct event and pass are retained. A copied link from a different event or environment may not authenticate them.
3. In guest Chats, use the plus/start-conversation control or More → Browse groups → New group. Choose people from the event and create an invite-only group. Group creation does not automatically invite every attendee.
4. Open Meetups, choose the intended group and create a meetup with its title, date/time, location and optional capacity. Members can view meetups and respond. A meetup response does not record venue or session admission.
5. Organizer group controls manage join policy, membership, channels and reports. Announcement channels are organizer posts and read-only for ordinary guests. Guests can use message reactions and the emoji picker in permitted conversations.
6. If an adult cannot enter, review the guest record and open organizer FestioMe → Settings → Guest chat access. Select Only approved adults and approve only people whose adult status you have confirmed. Do not bypass junior restrictions or use a staff identity as the guest. Confirm the correct event and pass before retrying.

> **Important:** Community access, message permissions and guardian pickup authorization are separate. FestioMe needs connectivity; it is not an offline chat system.

Broadcast an update

Send an event update to a reviewed audience using the event's enabled channels.

1. Open Guest Communication and the broadcast composer. Select the correct event before selecting recipients.
2. Choose an audience filter or explicit guests. Select recipients by ticket type selects a snapshot of the loaded guests, such as Teachers or Volunteers; review the selected names and count. An empty ticket-type selection must not be treated as All guests.
3. Write the message and select the enabled email, SMS or WhatsApp channels. Check contact details, applicable consent and the credit estimate before sending.
4. Review the message and recipients, then confirm the send. Queued means accepted for background processing, not delivered. Check delivery records for final channel status and failures.
5. Use Scheduler for a later update. Dynamic audiences are evaluated when sent; frozen audiences preserve the selected recipient set. Review event timezone, timing and status before scheduling.
6. Resolve the reason for failed delivery before retrying. Do not resend to everyone merely because some recipients failed.

> **Important:** Sent messages cannot be recalled. Do not promise delivery when a job is only queued. Provider/network availability and messaging consent still apply.

Find your timetable and ask a speaker

1. Open your personal GuestHub and choose Programme. Select the day and search by session, room, speaker or age group.
2. Check the event timezone and the latest room information before travelling to a session. A listed session may still have age, capacity or admission requirements.
3. For questions open Festio Live, select Questions & answers only, search the speaker/session title and open the matching Ask the Sheikh activity.
4. Submit your question; it may wait for moderator approval. Use Ask another question to send an additional question to the same activity.
5. Use Need help? or Communications in GuestHub to contact the event organizer. Your personal pass remains the route for admission, not a chat message.

FestioMe chats, groups and meetups

1. Open FestioMe from your own GuestHub to retain the correct event and pass. Chats is the conversation workspace; Back to GuestHub returns to event services.
2. Choose an event chat or permitted direct message. Use the emoji picker or reactions; organizer announcement channels are read-only for ordinary guests.
3. Use the Chats plus button or More → Browse groups → New group to select event members and create an invite-only conversation.
4. Open Meetups and select the group to see or create gatherings. Check date/time, location and capacity before responding. A meetup RSVP is not a session or gate check-in.
5. If access is denied or your pass is not found, return through the correct GuestHub and ask the organizer to review your access. Junior restrictions and adult approvals still apply.

> **Important:** Do not share a personal GuestHub/pass link as a public community invitation. Chat and meetup updates require connectivity.
