

EventQR — Help & How-To

A plain, printable copy of the guide. For the interactive version, open [/guide](#) · [Get started free](#)

Organizer

Create an event, invite guests, and run check-in on the day.

Get started

1. Open the site and choose Get Started → sign in with Google or email.
2. You land in the Admin panel with your own organization, ready to go.

Create your event

1. Admin → New Event.
2. Enter the event name, host/organizer (optional), date & time, and base URL.
3. Save. Open the event to see its tabs: Overview, Guests, Team, Invite.

The screenshot shows the EventQR Admin Panel interface. At the top, there's a navigation bar with 'EventQR', 'Admin', 'Dashboard', 'Scanner', and 'Help'. The user 'claude Admin' is logged in, with a 'Sign out' link. The main section is titled 'Admin Panel' and includes a '+ New Event' button. Below this, there's a 'Select Event' dropdown menu showing 'Demo Wedding — Alex & Sam' with 'Edit' and 'Delete' links. The 'Overview' tab is active, showing 'Guests: 0', 'Team', and 'Invite' options. The 'Event Status' section shows the event is in 'Draft' status, with a 'Start Event' button and a description: 'Draft ... set up guests and invites · Active ... scanning enabled · Ended ... read-only record'. Features like 'Seating OFF' and 'Menu OFF' are visible. The 'Notify on' section has buttons for 'Email ON', 'SMS ON', and 'WhatsApp ON'. Below this is the 'Live Spreadsheet Sync' section, which includes a text input for a Google Sheets or OneDrive share URL, a frequency selector set to 'Every 60 sec', and 'Save' and 'Sync now' buttons. At the bottom, there's a 'Guest Management' section with an 'Upload CSV' button, a checkbox for 'Import from Google Sheets / Excel', and buttons for 'Generate QR Codes', 'Send to Unsent (0)', and 'Resend to All'.

Add your guest list

1. Overview tab → Download template — it contains exactly the columns your event uses (ticket type, shipping address, ...) with an Excel dropdown for ticket types.
2. Fill it in and Upload CSV/Excel. Your own list works too: column names match in any case or spacing (First Name = first_name), and email is optional.
3. Or paste a Google Sheets / OneDrive share link — import once, or save it as a source to auto-sync every minute while the event is Active.
4. Watch the sync status: red = sync failed; amber = imported with warnings (unknown ticket types, rows over your plan limit, bad phone numbers).
5. Re-importing never duplicates guests — it fills in missing phone numbers, ticket types, and addresses instead.
6. Or add people one at a time in the Guests tab.
7. Free events allow up to 25 guests (imports included) — an Event Pass raises the limit.

Set up RSVP & invite page

1. Invite tab → "Invite Page & RSVP".
2. Pick Open (one shared link) or Closed (a unique private link per guest).
3. Optional: RSVP deadline, require approval, custom questions, cover image, message.
4. Use "Preview invite page" to see exactly what guests will get.

1. Open mode: share the event link, or use Manual invite for specific people.
2. Closed mode: use Bulk RSVP invites — Send to not-yet-invited, Remind no-reply, or Resend to all.
3. Email is always free; SMS/WhatsApp require an Event Pass + message credits.

Track RSVPs & approvals

1. Guests tab shows each person: Attending / Declined / Pending / No reply, plus check-in status.
2. If approval is on, approve or reject pending RSVPs (or Approve all).

Broadcast an update

1. Invite tab → Broadcast Message.
2. Pick a target: All, RSVP Attending/Declined/No-reply, Checked-in, or Not checked-in.
3. Send via email / SMS / WhatsApp.

Seating & menu (paid)

1. Overview → Features → turn on Seating / Menu (requires an Event Pass).
2. Seating tab: create tables, auto-assign or place guests, reserve seats.
3. Menu tab: add categories/items; guests pick meals; track catering.

Venue Access: zones & ticket types (paid)

1. Overview → Features → turn on Access (requires an Event Pass).

2. Access tab → Zones: create areas (Main Hall, VIP Lounge, ...) with optional capacity and direction mode (entry / exit / both).
3. Ticket types: create GA / VIP / Press and pick which zones each may enter — leave empty for all zones.
4. Assign: set a guest's ticket type one by one, or add a ticket_type column to your imported list / synced sheet.
5. Guests without a ticket type can enter every zone; capacity limits still apply.
6. Analytics: live occupancy per zone, peak arrival times, room-to-room flow, and each guest's journey through the venue.

Logistics: ship merch & gifts (paid)

1. Overview → Features → turn on Logistics.
2. Logistics tab: create shipments — merch before the event or gifts after — and add their items.
3. Guest addresses come from RSVP (guests fill them in) or from the ship_address columns in your imported list.
4. Share the packing-list page with your fulfilment vendor — they see addresses and items, no login needed.

Gift registry (paid)

1. Overview → Features → turn on Registry.
2. Registry tab: add gift items (paste a store link to auto-fill details) and cash funds; write a welcome message.
3. Share the public registry link — guests mark what they'll bring so nobody doubles up.
4. No money moves through the platform — guests buy or give directly.

Add your team

1. Team tab → "Add a teammate" → enter email + role (Staff to scan, Admin to manage).
2. They sign in with that email and the account links automatically.
3. Assign staff to the specific event so they can scan it.

Check-in day

1. Check-in needs an Event Pass. Set the event to Active (Overview).
2. You or your staff open Scanner and scan each guest's QR — admission is instant.
3. Watch it live on the Dashboard.

Upgrade & credits

1. Invite tab → Event Pass. Free = email-only, 25 guests, branding, no paid features.
2. Buy a pass to unlock SMS/WhatsApp, more guests, check-in, seating & menu, venue access zones, logistics, gift registry, and remove branding.
3. Low on messages? Buy a credit top-up in the same panel. See all plans at </pricing>.

Staff / Scanner

Check guests in at the door.

Join & sign in

1. Your organizer adds you by email — sign in with that exact email.
2. They assign you to the event you'll be working.

Check guests in

1. Open Scanner → Start Camera → point at each guest's QR.
2. No app to install — it runs right in the browser.

Reading the result

1. Welcome — admitted successfully.
2. Already admitted — the ticket was used before.
3. Not assigned / needs pass — ask the organizer.

Zone scanning (Venue Access events)

1. If the event uses Venue Access, the Scanner shows a zone + direction picker — set it to where you're standing (e.g. Main Hall · In).
2. Each scan logs the guest in or out of that zone and shows Allowed (green) or Denied (red) with the live zone occupancy.
3. Denied reasons: the guest's ticket type isn't valid for this zone, or the zone is at capacity.
4. A guest's first allowed entry also checks them in for the event — no separate check-in scan needed.

Guest

You received an invite.

Open your invite

1. Tap the link in your email, SMS, or WhatsApp.

RSVP

1. Fill in the form and any questions → Confirm (or Can't make it).
2. On a personal link you can change your answer until the deadline.

Get your ticket

1. Once confirmed, your ticket QR is emailed to you.
2. On the day, show the QR (phone or printed) at the entrance.
3. Some events use ticket types (e.g. VIP) and zones — your ticket controls which areas you can enter.

Meals & plus-ones

1. If the host set a menu, pick your meal right on your ticket page before the deadline.
2. Coming as a couple? Use the partner option on your ticket to link your plus-one so you're seated together.

Gift registry

1. If the host shares a registry link, open it to browse gift ideas and cash funds.
2. Mark what you'll bring so others don't double up — you buy or give directly, not through the platform.
